

DIFFERENTIAL GEOMETRY APPLIED TO DYNAMICAL SYSTEMS

Jean-Marc Ginoux

Université du Sud, France

Contents

I	Dynamical Systems	18
1	Introduction	19
1.1	Galileo's pendulum	19
1.2	D'Alembert transformation	21
1.3	From differential equations to dynamical systems	22
2	Dynamical Systems	23
2.1	State space – phase space	23
2.2	Definition	24
2.3	Existence and uniqueness	24
2.4	Flow, fixed points and null-clines	25
2.5	Stability theorems	29
2.5.1	Linearized system	29
2.5.2	Hartman-Grobman linearization theorem	29
2.5.3	Liapounoff stability theorem	29
2.6	Phase portraits of dynamical systems	30
2.6.1	Two-dimensional systems	30
2.6.2	Three-dimensional systems	34
2.7	Various types of dynamical systems	37
2.7.1	Linear and nonlinear dynamical systems	37
2.7.2	Homogeneous dynamical systems	38
2.7.3	Polynomial dynamical systems	38
2.7.4	Singularly perturbed systems	39
2.7.5	Slow-Fast dynamical systems	39
2.8	Two-dimensional dynamical systems	40
2.8.1	Poincaré index	40
2.8.2	Poincaré contact theory	42
2.8.3	Poincaré limit cycle	42
2.8.4	Poincaré-Bendixson Theorem	44
2.9	High-dimensional dynamical systems	46
2.9.1	Attractors	46

2.9.2	Strange attractors	47
2.9.3	First integrals and Lie derivative	49
2.10	Hamiltonian and integrable systems	49
2.10.1	Hamiltonian dynamical systems	49
2.10.2	Integrable system	50
2.10.3	K.A.M. Theorem	52
3	Invariant Sets	54
3.1	Manifold	54
3.1.1	Definition	54
3.1.2	Existence	55
3.2	Invariant sets	55
3.2.1	Global invariance	55
3.2.2	Local invariance	56
4	Local Bifurcations	59
4.1	Introduction	59
4.2	Center Manifold Theorem	59
4.2.1	Center manifold theorem for flows	60
4.2.2	Center manifold approximation	61
4.2.3	Center manifold depending upon a parameter	64
4.3	Normal Form Theorem	65
4.4	Local Bifurcations of Codimension 1	70
4.4.1	Saddle-node bifurcation	72
4.4.2	Transcritical bifurcation	73
4.4.3	Pitchfork bifurcation	75
4.4.4	Hopf bifurcation	77
5	Slow-Fast Dynamical Systems	78
5.1	Introduction	78
5.2	Geometric Singular Perturbation Theory	81
5.2.1	Assumptions	81
5.2.2	Invariance	82
5.2.3	Slow invariant manifold	83
5.3	Slow-fast dynamical systems – Singularly perturbed systems	89
5.3.1	Singularly perturbed systems	89
5.3.2	Slow-fast autonomous dynamical systems	90
6	Integrability	92
6.1	Integrability conditions, integrating factor and multiplier	92
6.1.1	Two-dimensional dynamical systems	93

6.1.2	Three-dimensional dynamical systems	96
6.2	First integrals – Jacobi’s last multiplier theorem	101
6.2.1	Jacobi’s last multiplier theorem	102
6.3	Darboux theory of integrability	103
6.3.1	Algebraic particular integral – General integral	103
6.3.2	General integral	105
6.3.3	Multiplier	107
6.3.4	Algebraic particular integral and fixed points	108
6.3.5	Homogeneous polynomial dynamical system of degree m	109
6.3.6	Homogeneous polynomial dynamical system of degree two	115
6.3.7	Planar polynomial dynamical systems	121
II Differential Geometry		126
7	Differential Geometry	127
7.1	Concept of curves – Kinematics vector functions	128
7.1.1	Trajectory curve	128
7.1.2	Instantaneous velocity vector	128
7.1.3	Instantaneous acceleration vector	129
7.2	Gram-Schmidt process – Generalized Frénet moving frame	129
7.2.1	Gram-Schmidt process.	130
7.2.2	Generalized Frénet moving frame.	130
7.3	Curvatures of trajectory curves – Osculating planes	131
7.4	Curvatures and osculating plane of space curves	133
7.4.1	Frénet trihedron – Serret-Frénet formulae	133
7.4.2	Osculating plane	134
7.4.3	Curvatures of space curves	135
7.5	Flow curvature method	136
7.5.1	Flow curvature manifold	136
7.5.2	Flow curvature method	137
8	Dynamical Systems	138
8.1	Phase portraits of dynamical systems	138
8.1.1	Fixed points	138
8.1.2	Stability theorems	140
9	Invariant Sets	148
9.1	Invariant manifolds	148
9.1.1	Global invariance	149
9.1.2	Local invariance	149

9.2	Linear invariant manifolds	151
9.3	Nonlinear invariant manifolds	157
10	Local Bifurcations	160
10.1	Center Manifold	160
10.1.1	Center manifold approximation	160
10.1.2	Center manifold depending upon a parameter	167
10.2	Normal Form Theorem	174
10.3	Local bifurcations of codimension 1	179
11	Slow-Fast Dynamical Systems	180
11.1	Slow manifold of n-dimensional slow-fast dynamical systems . . .	181
11.2	Invariance	184
11.3	Flow Curvature Method – Singular Perturbation Method	185
11.3.1	Darboux invariance – Fenichel’s invariance	187
11.3.2	Slow invariant manifold	188
11.4	Non-singularly perturbed systems	197
12	Integrability	199
12.1	First integral	199
12.1.1	Global first integral	199
12.1.2	Local first integral	200
12.2	Linear invariant manifolds as first integral	201
12.3	Darboux theory of integrability	205
12.3.1	General integral – Multiplier	205
12.3.2	Homogeneous polynomial dynamical system of degree two	207
12.3.3	Planar polynomial dynamical systems	208
13	Inverse Problem	210
13.1	Flow curvature manifold of polynomial dynamical systems	210
13.1.1	Two-dimensional polynomial dynamical systems	210
13.1.2	Three-dimensional polynomial dynamical systems	212
13.2	Inverse problem for polynomial dynamical systems	214
13.2.1	Two-dimensional polynomial dynamical systems	214
13.2.2	Three-dimensional polynomial dynamical systems	215
III	Applications	217
14	Dynamical Systems	218
14.1	FitzHugh-Nagumo model	218
14.2	Pikovskii-Rabinovich-Trakhtengerts model	219

15 Invariant sets - Integrability	220
15.1 Pikovskii-Rabinovich-Trakhtengerts model	220
15.2 Rikitake model	223
15.3 Chua's model	224
15.4 Lorenz model	225
16 Local bifurcations	227
16.1 Chua's model	227
16.2 Lorenz model	229
17 Slow-Fast Dynamical Systems	231
17.1 Piecewise Linear Models 2D & 3D	231
17.1.1 Van der Pol piecewise linear model	231
17.1.2 Chua's piecewise linear model	233
17.2 Singularly Perturbed Systems 2D & 3D	235
17.2.1 FitzHugh-Nagumo model	235
17.2.2 Chua's model	236
17.3 Slow Fast Dynamical Systems 2D & 3D	237
17.3.1 Brusselator model	237
17.3.2 Pikovskii-Rabinovich-Trakhtengerts model	238
17.3.3 Rikitake model	239
17.4 Piecewise Linear Models 4D & 5D	240
17.4.1 Chua's fourth-order piecewise linear model	240
17.4.2 Chua's fifth-order piecewise linear model	242
17.5 Singularly Perturbed Systems 4D & 5D	244
17.5.1 Chua's fourth-order cubic model	244
17.5.2 Chua's fifth-order cubic model	245
17.6 Slow Fast Dynamical Systems 4D & 5D	246
17.6.1 Homopolar dynamo model	246
17.6.2 Mofatt model	248
17.6.3 Magnetoconvection model	249
17.7 Slow manifold gallery	251
17.8 Forced Van der Pol model	252
Discussion	254
18 Appendix	257
18.1 Lie derivative	257
18.2 Hessian	257
18.3 Jordan form	258
18.4 Connected region	259

18.5	Fractal dimension	259
18.5.1	Kolmogorov or capacity dimension	260
18.5.2	Liapounoff exponents – Wolf, Swinney, Vastano algorithm	261
18.5.3	Liapounoff dimension and Kaplan-Yorke conjecture . . .	262
18.5.4	Liapounoff dimension and Chlouverakis-Sprott conjecture	263
18.6	Identities	263
18.6.1	Concept of curves	264
18.6.2	Gram-Schmidt process and Frénet moving frame	264
18.6.3	Frénet trihedron and curvatures of space curves	267
18.6.4	First identity	268
18.6.5	Second identity	269
18.6.6	Third identity	270
18.7	Homeomorphism and diffeomorphism	270
18.7.1	Homeomorphism	270
18.7.2	Diffeomorphism	270
18.8	Differential equations	271
18.8.1	Two-dimensional dynamical systems	271
18.8.2	Three-dimensional dynamical systems	271
18.9	Generalized Tangent Linear System Approximation	272
18.9.1	Assumptions	272
18.9.2	Corollaries	273
	Mathematica Files	277
	Bibliography	282
	Index	297

List of Figures

1	Synopsis	17
1.1	Galileo's pendulum	20
2.1	Free fall	26
2.2	Volterra-Lotka predator-prey model	27
2.3	Phase plane stability diagram	32
2.4	Inverted pendulum	33
2.5	stability diagram	36
2.6	Saddle-focus	37
2.7	Poincaré limit cycle	43
2.8	Duffing oscillator	45
2.9	Lorenz butterfly	48
2.10	Spherical pendulum	51
2.11	Hénon-Heiles Hamiltonian	53
2.12	Transversal Poincaré section (p_2, q_2) of Hénon-Heiles Hamiltonian	53
3.1	Stable W^S and unstable W^U manifolds	58
4.1	Part of the center manifold in green	61
6.1	General integral	102
7.1	Osculating plane	134
8.1	Duffing oscillator	144
9.1	Local invariance	150
10.1	Center manifold	164
11.1	Van der Pol slow manifold	192
11.2	Chua's slow invariant manifold in (xz) -plane	196
11.3	Lorenz slow manifold	198

12.1	Local first integral of Van der Pol model	201
12.2	Volterra-Lotka's first integral	204
12.3	First integral of quadratic system	206
17.1	Van der Pol piecewise linear model <i>slow invariant manifold</i>	233
17.2	Chua's piecewise linear model <i>slow invariant manifold</i>	234
17.3	FitzHugh-Nagumo model <i>slow invariant manifold</i>	235
17.4	Chua's cubic model <i>slow invariant manifold</i>	236
17.5	Brusselator's model <i>slow invariant manifold</i>	237
17.6	(PRT) model <i>slow invariant manifold</i>	238
17.7	Rikitake model <i>slow invariant manifold</i>	239
17.8	Chua's model invariant hyperplanes in (x_1, x_2, x_3) phase space	242
17.9	Chua's model invariant hyperplanes in (x_1, x_2, x_3) phase space	243
17.10	Chua's model slow invariant manifold	245
17.11	Chua's slow invariant manifold	246
17.12	Dynamo model slow invariant manifold	247
17.13	Mofatt model slow invariant manifold	248
17.14	Magnetoconvection slow invariant manifold	250
17.15	Chemical kinetics model - Neuronal bursting model	251
17.16	Forced Van der Pol model slow invariant manifold	253
17.17	Chua's cubic model attractor structure	256

List of Tables

15.1 Invariant manifolds of the (PRT) model	222
15.2 Invariant manifolds of the Rikitake model	223
15.3 Invariant manifolds of the Lorenz model	226

- diffeomorphism, 29, 270
- differential equation, 13, 19–24, 27, 41, 42, 44, 46, 59, 62, 64, 70, 92, 93, 95–101, 127, 138, 160, 167, 181, 219, 223, 224, 240, 242, 244, 245, 271, 272
- differential geometry, 13, 14, 17, 127, 131, 154, 181, 254, 263, 278
- dissipative, 46–48, 101, 260, 262
- divergence, 47, 93, 97
- Duffing, 45, 144, 169, 170, 277–279
- dynamical system, 13–16, 18, 22–30, 33, 34, 37–47, 49, 50, 54–66, 68–70, 72–74, 76–78, 89–92, 95–97, 99–101, 103–115, 118, 119, 127, 128, 131–138, 140–142, 144–150, 155–157, 159–161, 163, 164, 166–169, 171, 174, 175, 178, 180–183, 185, 188, 192, 193, 197, 199–202, 205, 207, 208, 210, 212–216, 228, 229, 254, 255, 257, 264, 266, 272–275, 277, 278, 280
- Fenichel, 15, 78, 79, 81, 82, 85, 88, 91, 180, 185, 187, 254
- first integral, 14–16, 49–51, 100–102, 104–106, 108, 110, 111, 114–119, 122–125, 148, 149, 156, 199–209, 221, 224, 225, 254, 255, 278, 279
- FitzHugh-Nagumo, 16, 218, 235, 280, 281

- non-autonomous, 231, 252
 non-singularly perturbed systems, 16, 90, 91, 197, 255, 279
 nonlinear invariant manifold, 157, 221, 254
 normal forms, 15, 65, 66, 68–70, 127, 137, 160, 174, 175, 178, 179, 220, 254, 258
 null-clines, 25, 26, 28

 orbit, 29, 45, 51, 55, 78, 180, 261
 osculating plane, 14, 131–136, 140–144, 146, 202, 203, 234

 pendulum, 19, 20, 154
 phase, 23, 24, 26, 27, 30, 32, 33, 44, 45, 47, 49, 59, 90, 101, 138, 232, 234, 242, 243, 245–248, 250, 253, 256, 260
 piecewise linear model, 16, 80, 231–234, 240–243, 280, 281
 Pikovskii, 16, 158, 219, 220, 238, 280, 281
 pitchfork bifurcation, 14, 64, 72, 75, 76, 137, 160, 174, 179, 229, 230
 Poincaré, 15, 43, 44, 46, 92, 128, 144
 Poincaré index, 14
 Poincaré section, 53, 260

 quadratic system, 206

 relaxation oscillations, 27, 39, 231
 relaxation oscillator, 79
 Rikitake, 16, 223, 239, 246, 255, 280, 281

 saddle, 31, 33, 35, 37, 40, 45, 73, 137, 142, 144, 145, 160, 179
 saddle points, 52
 saddle-focus, 145
 saddle-node, 145
 saddle-node bifurcation, 72, 73
 singular approximation, 39, 85, 88, 90, 190, 192, 195, 200, 201, 235–237
 Singular Perturbation Method, 81, 185, 192, 196, 236, 278
 singularly perturbed systems, 14–16, 28, 39, 58, 78–80, 82–84, 87, 89–91, 137, 148, 180, 181, 186, 188, 189, 193, 194, 197, 200, 231, 235, 236, 238, 239, 244, 247–249, 254, 255, 281
 slow invariant manifold, 14–17, 78, 82, 83, 85, 88, 90, 91, 137, 180, 182, 185–189, 191, 193, 194, 196, 220, 232, 233, 236–240, 243–251, 253–255
 slow-fast dynamical systems, 14, 39, 78, 89, 90, 180, 181, 184, 185, 192, 231, 237, 255, 278–280
 spherical pendulum, 50, 51, 200, 277
 stability, 29, 30, 32, 36, 59, 73–75, 127, 137, 138, 140, 142, 144, 147, 148, 180, 218
 strange attractor, 14, 47, 50, 260–263

 tangent linear system approximation, 17, 181–183, 272, 274–276
 torsion, 131, 134–136, 154, 181, 197, 266–268
 trajectory curve, 13, 14, 24–26, 42, 44, 46, 47, 49–53, 101, 127–132, 136, 137, 155, 156, 181, 201, 202, 254–256, 260, 261, 263, 264, 266–268
 transcritical, 137, 160, 170, 179
 transcritical bifurcation, 72–74

 Van der Pol, 14, 16, 27, 39, 41, 43, 44, 190, 192, 200, 201, 211, 215, 218, 231, 232, 235, 252, 253, 278–280
 Volterra, 27, 28, 37, 118, 153, 156, 204, 279

- fixed point, 15, 16, 25, 26, 28–31, 33–35, 37, 40–46, 55–57, 60, 61, 70, 72–77, 108, 114, 127, 128, 132, 134, 137–147, 185, 214, 216, 218, 219, 234, 241, 243, 256
- fixed point stability, 15, 254
- flow curvature manifold, 13, 15, 16, 127, 136–144, 146, 148, 151–154, 156, 157, 159–161, 163, 164, 166–168, 170, 171, 174, 175, 179, 182, 184, 186, 188, 191–193, 196, 197, 201, 202, 204, 206, 207, 209–216, 218–221, 224, 225, 227, 232–241, 243, 244, 246–250, 252, 254–256
- flow curvature method, 13, 15, 17, 90, 109, 127, 136, 137, 159, 185, 186, 190, 192, 195–197, 200, 252, 254–256, 276, 279
- Forced Van der Pol, 17, 252, 255, 281
- Galois, 147, 181
- Geometric Singular Perturbation Theory, 14, 15, 58, 78, 79, 81, 82, 90, 91, 180, 185, 186, 188, 190–193, 195–197, 201, 254, 255, 278
- Grobman, 29, 58
- Groebner, 215, 216
- Hénon-Heiles Hamiltonian, 52, 53, 277
- Hamiltonian, 14, 49, 50, 52, 53, 199, 262
- harmonic oscillator, 49
- Hartman, 29, 58
- homeomorphism, 29, 270
- homopolar dynamo, 16, 246, 247
- Hopf, 77, 137, 160
- Hopf bifurcation, 76, 77
- hyperbolic, 29, 40, 56, 57, 78, 81, 180
- hyperbolic points, 52
- implicit function theorem, 55, 82, 84, 85, 87, 88, 186
- integrability, 54, 92–103, 127, 148, 159, 199, 205, 254, 255, 278–280
- invariant manifold, 54, 56–58, 60, 71, 78, 104, 105, 107, 108, 110, 112–115, 127, 137, 148–152, 154–159, 180, 184, 199, 201, 224–226
- invariant tori, 52
- inverse problem, 16, 137, 210, 214, 255, 280
- inverted pendulum, 33, 37
- Jacobian, 29, 30, 33, 34, 37–39, 41, 54–57, 60, 61, 70, 71, 73–75, 77, 90, 91, 95, 129, 140–142, 145, 146, 161, 180–186, 234, 273–276
- Jordan form, 258, 259
- Jordan form, 31, 35, 41, 258
- K.A.M. theorem, 14, 52
- K.A.M. tori, 52, 53
- Kapteyn-Bautin, 125, 209, 278
- LaSalle, 54
- Liapounoff, 14, 29, 30
- Liapounoff dimension, 260, 262, 263
- Liapounoff exponents, 261–263
- Lie derivative, 14, 15, 42, 49, 94, 119, 140–142, 149, 150, 153, 154, 157, 158, 184, 187, 192, 197, 200, 201, 221, 226, 232, 234, 237–239, 241, 244, 246, 247, 249, 250, 252, 255, 257
- limit cycle, 14, 42–44, 46, 77, 277
- linear, 29, 37, 38, 56, 65, 67, 134, 137, 148, 151, 152, 154–156, 159, 175, 180–183, 201, 233, 240–242, 244, 245, 258, 272–276
- linear invariant manifold, 15, 153, 156, 202–205, 207, 208, 220, 254
- Liouville, 47, 92, 199, 262
- local bifurcations, 254
- Lorenz, 16, 48, 90, 91, 147, 197, 198, 212, 216, 225, 226, 229, 230, 249, 255, 263, 278–280
- Lorenz butterfly, 48, 277
- Lorenz slow manifold, 198
- magnetoconvection, 16, 249, 250, 281
- Mofatt, 16, 246, 248, 249, 281
